I am going to be talking about what I learned, liked, activities, and sights we have seen at school. I am going to be telling you what presentations we have seen and what I learned about them. I am also going to be telling you what my favorite part and activities were. My favorite. Maybe after you read this you will want to go or take a visit to the UFO. You should go you will learn a lot and have a very fun experience. You should ask your teacher if you could go on a field trip or you could ask your parents if they could take you there to go and look around.

We learned a lot of cool and amazing stuff over the last five days. We went one amazing activity that we did was we made these really cool wire balls. Things after it is all done and you plug a battery into it the two little bulbs on it will light up and you can take it home with you to show your parents what you made. It was one of the best hands on project that we made or did. It took a lot of patients but it's all worth it at the end. It was so cool how it light up. I didn't think it would work because it was my first try.
We went on a campus tour it was so fun. We went and seen the harry potter room it looked so cool with the nice pictures in it and all the wooden chairs with real velvet cushioning so it would be comfy to sit on. We also went to the hub it was really fun. I found out that the students who go there and their are a lot of like tchdaout. The hub is supposed to look like a skyscraper on its side. The hub is really loud and it looks really nice inside you should really go see it sometimes.

That's what we learned, did, and the sights we did over the past five days. We learned all of cool stuff to do and learn about. You should really go to the W.O.A if they have what you want to take. Or you should go on a field trip as a class it would be so fun. You will learn and see a lot of cool stuff and see to see and explore. They teach you life lesson and skills. So those are some reasons why you should come to U school.
